## **the difference between raman and infra red spectroscopy**

June 3rd, 2020 - infrared ir and raman spectroscopy are both used to identify unknown molecular structures and are based on the vibrational energy transitions of the molecules the raman technique detects the spectra of the light scattered elastically and inelastically from the sample while the ir technique is based on the absorption lines appearing on the infrared spectrum'

**'13 selection rules for ir and raman spectroscopy**

May 31st, 2020 - raman spectroscopy unlike ir spectroscopy which measures the energy absorbed raman spectroscopy consists of exposing a sample to high energy monochromatic light that interacts with the molecule and causes electronic vibrational or translational excitations'

**'raman spectroscopy**

June 2nd, 2020 - raman spectroscopy ? r ?? m ?n named after indian physicist c v raman is a spectroscopic technique typically used to determine vibrational modes of molecules although rotational and other low frequency modes of systems may also be observed raman spectroscopy is monly used in chemistry to provide a structural fingerprint by which molecules can be identified'
