'please explain how to prepare 1000ml of a 0.1 molar

May 28th, 2020 - a 0.1 M solution contains one mole of solute per liter of solution. Begin by calculating the mass of solute needed for the desired volume and concentration. In this case, you need to prepare 1 liter.

'what is mole per liter used for answers

May 20th, 2020 - water is about 18 grams per mole and 1000 grams per liter, so divide it out: 1000/18 = 55.56 moles/liter. Or, you can do this more accurately if you get exact numbers off the periodic table, etc.'

'can someone explain to me this chemistry question yahoo

June 5th, 2020 - molarity is defined as moles of solute per liter of solution. Molality is defined as moles of solute per kilogram of solution. The two can be related because the density of the solution is given. Since 1 liter is 1000 ml, then we can find the mass of the liter of solution by multiplying by density: $d = m/v$, so $m = d \times v$ in ml.
