---

**Did you know that an adult human heart beats over 100,000 times a day? The human heart anatomy is a complex system of blood vessels and chambers. The heart pumps blood to the rest of the body through the arteries and returns it through the veins. The heart is located in the chest, between the lungs, and is about the size of a fist. The heart is made of muscle and is covered by a protective layer called the pericardium. The heart is connected to the rest of the body by a network of blood vessels called the circulatory system. The heart pumps blood to the rest of the body through the arteries and returns it through the veins. The heart is located in the chest, between the lungs, and is about the size of a fist. The heart is made of muscle and is covered by a protective layer called the pericardium. The heart is connected to the rest of the body by a network of blood vessels called the circulatory system.**

*April 23rd, 2018 - In the human heart blood from the lungs enters the heart through the left atrium pumps into the left ventricle out the aorta and through the body then returns into the right atrium pumps into the right ventricle and exits to the lungs Using the above diagram which set of letters correctly'*
